### WHY USE VITAL OXIDE?

Not all disinfectants and mold removers are created equal. Vital Oxide uses a unique chemical compound called chlorine dioxide. Chlorine dioxide has been used during Anthrax attacks, in the aftermath of Hurricane Katrina, to purify drinking water, and most recently to kill MRSA in schools and hospitals. While other competitors and manufacturers have attempted to copy and produce a form of stabilized chlorine dioxide similar to Vital Oxide, our revolutionary formula is simply unequaled.

Also consider carefully what kinds of chemicals you want around your children, employees, patients, students, friends, and family members. When evaluating and comparing disinfectant products, take a close look at their core ingredients. Most disinfectants and mold removers on the market are extremely toxic and leave behind harmful byproducts and nauseous fumes.

With Vital Oxide, however, you no longer need to use bleach and other harsh chemicals that increase volatile organic compounds (VOCs) in your environment. You can have the peace of mind that you are using a disinfectant that won't irritate your skin and doesn't come with any alarming safety warnings and precautions, while still effectively eliminating pathogens and allergens in your home and workspace.

## ULTIMATE PEOPLE PROVIDE ULTIMATE SERVICES

### HIGHLIGHTS

- EPA-registered hospital disinfectant (lowest toxicity category given by the EPA)
- NSF-registered for no rinse required on food-contact surfaces
- Free of volatile organic compounds
- Proven effective in killing Methicillin-resistant Staphylococcus aureus (MRSA), Norovirus, Legionella pneumophila, E. Coli, H1N1 virus (swine flu), and other pathogens in independent testing
- Bleach-free, phosphate-free, free of harsh chemicals and skin irritants
- Hypo-allergenic
- Non-corrosive to treated articles
- No added fragrances or perfumes
- No nauseous smells or fumes
- Kills mold and mildew at the source, effective on mold spores and can prevent regrowth of mold for up to 7 months on tile and other building materials

## Interim Guidance for Cleaning and Disinfection of Public and Private Facilities for COVID-19

March 10, 2020

*To help prevent spread of COVID-19, procedures and supplies should be in place to encourage proper hand and respiratory hygiene as well as routine cleaning and disinfection of high-risk locations. This guidance is provided for any local or state public or private facility so that owners, operators and other individuals can incorporate these procedures into their facility protocols.*

### **Background:**

In December 2019, a new respiratory disease called Coronavirus Disease 2019 (COVID-19) was detected in China. COVID-19 is caused by a virus (SARS-CoV-2) that is part of a large family of viruses called coronaviruses.

### **Hand Hygiene:**

Signage with handwashing procedures should be posted in prominent locations promoting hand hygiene.

- Regular hand washing with soap and water for at least 20 seconds should be done:
  - Before and after eating.
  - After sneezing, coughing, or nose blowing.
  - After using the restroom.
  - Before handling food.
  - After touching or cleaning surfaces that may be contaminated.
  - After using shared equipment and supplies like electronic equipment such as keyboards, mice and phones.

### **What steps should be taken to clean and disinfect against COVID-19?**

#### **Now:**

All settings should continue performing routine cleaning. High-risk locations (see below) warrant cleaning and disinfection on a regular schedule.

#### **If an individual with laboratory confirmed COVID-19 was symptomatic while in a facility:**

Clean and disinfect throughout the area.

If soap and water are not available, use an alcohol-based hand sanitizer that contains at least 60% alcohol. Use of alcohol-based hand sanitizers by children should always be supervised by adults.

### **Respiratory Hygiene:**

- Covering coughs and sneezes with tissues or the corner of elbow.
- Disposing of soiled tissues immediately after use.

## **ULTIMATE INSTALLATIONS JOBSITE GUIDANCE AND PROTOCOLS**

*In an effort to ensure the well-being of your crews and our customers, we expect all Service Providers to follow these preventative measures and adhere to the requirements below when you are on an Ultimate Installation jobsite.*

### **Personal Hygiene Practices and Preventative Measures**

- Wash your hands often with soap and water for at least 20 seconds especially after you have been in a public place, or after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands and rub them together until they feel dry.
- Cover coughs and sneezes with your arm or tissue
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick and stay home if you are sick.
- Practice social distancing— 6 feet is recommended.
- Clean AND disinfect frequently touched surfaces daily. This includes tables, doorknobs, light switches, countertops, handles, desks, phones, keyboards, toilets, faucets, and sinks.
- Seek medical advice if you exhibit any symptoms of COVID-19, including high fever, cough or shortness of breath.
- If you test positive for COVID-19 or have been in direct contact with someone who did, **immediately notify your supervisor.**

### **Work Site Requirements**

- Refrain from any hand shaking
- Expect additional screening before entering sites including questions about travel; separate entrances and limited contact with on-site employees may also be required
- Clean and disinfect frequently touched objects (tools and equipment) daily
- Clean and disinfect all surface areas when completed including flat surfaces and handles
- Do not touch door handles or elevator buttons with bare hands.
- Wash your hands frequently throughout the day— that means when you arrive to the job site, several times during the job and then again when you leave the job.
- Clean your vehicle when you enter or leave it including the steering wheel, door handles and keys • Make efforts to try and ensure that handled trash / cardboard is removed from site daily.
- Face masks and gloves are recommended
- **When possible**, remain six feet away from team members, customers and other vendors. Avoid congregating with crew members at any time.

## Symptom Awareness

- If you develop warning signs for COVID-19, notify your supervisor and get medical attention immediately. Warning signs include, but are not limited to:
  - Fever
  - Cough
  - Trouble breathing
  - Persistent pain or pressure in the chest
  - New confusion or inability to arouse
  - Bluish lips or face
- If you test positive for COVID-19 below are the CDC recommended protocols:
  - Stay home: Most people with COVID-19 have mild illness and are able to recover at home without medical care. Do not leave your home, except to get medical care. Do not visit public areas.
  - Stay in touch with your doctor. Call before you get medical care. Be sure to get care if you have trouble breathing, or have any other emergency warning signs, or if you think it is an emergency.
  - Avoid public transportation: Avoid using public transportation, ride-sharing, or taxis.

## Stay Informed

- Use reliable sources to ensure you are getting the most accurate information, including your state government, Centers for Disease Control and World Health Organization
- The following are available links to gather more information
  - <https://www.cdc.gov/coronavirus/2019-ncov/index.html>
  - <https://www.who.int/emergencies/diseases/novel-coronavirus-2019>

## State Directives

- If your state government issues a Stay at Home directive, read it very carefully. The specific guidelines are typically posted on the State government (or Governor's) website and give direction on the definition of "essential" businesses (and those that support them).
